What is a With Profits Policy	3
How we decide Bonus Rates	5
Further Information	7

1 Introduction

- 1.1 This document provides a guide as to how we manage our with profit funds, in particular With Profits Sub Fund 4. It is designed to help policyholders understand how a with profits policy works. This is an important document and you should keep it with your other insurance papers.
- 1.2 If we have sent you this guide it is because your policy is in With Profits Sub Fund 4 (WPSF4). If you have obtained this guide from the internet, there is a section “How Reliance Mutual’s With Profits Business has built up” that you can use to check that you have the correct guide for your policy, or you can contact us using one of the methods at the end of this guide.
- 1.3 The Society’s business is divided into four sub funds, which were created following the transfer of various other companies’ business to the Society in 2004. WPSF4 contains the with profits business originally written by Time Assurance Friendly Society in its Retirement Annuity Fund. WPSF4 also contains other policies that are not ‘with profits’.
- 1.4 Our approach to managing the fund may change and we will give you a new copy of this guide if any changes are made to it. At the end of this guide there is a section that tells you how you can get further information at any time.
- 1.5 This fund is not open to new business.
- 1.6 Reliance Mutual deducts amounts from WPSF4 for the expenses of administering the business in the fund. These charges are on a fixed basis that was established in 2004.
- 1.7 Reliance Mutual is a mutual insurance company. There are no shareholders and all profits available for distribution are shared among the with profit policyholders.
- 1.8 The profits that emerge from the business in WPSF4 are only available for distribution to policyholders in WPSF4.
- 1.9 We have some main aims that influence the way we manage our business. These are:
 - To give policyholders the promised minimum benefits in all reasonably foreseeable circumstances;
 - To treat policyholders fairly;
 - To meet the tests of solvency and capital adequacy required by regulatory bodies.

2 What is a With Profits policy?

- 2.1 A with profits policy is designed to provide a benefit at some future time. In WPSF4, the policy would normally provide the benefit in the form of a pension when you reach a certain age – perhaps 60 or 65. In most cases you can take part of the benefit from your policy as a lump sum in cash, tax-free.
- 2.2 If you would like to know exactly what benefit your policy provides, use one of the methods at the end of this guide to contact us.
- 2.3 In order to pay for the benefit, you pay us premiums. Many policies have regular premiums paid every month, but some have other ways of paying premiums. For some policies a single premium was paid when the policy started, which purchased all the benefits.
- 2.4 In exchange for paying the premiums the policy promises a minimum guaranteed benefit – often called the ‘basic guaranteed annuity’. The unique feature of a ‘*with profits*’ policy is that bonuses are added to this minimum guarantee as the policy progresses. The next section tells more about how we calculate bonuses.

How we invest your premiums

- 2.5 We invest your premiums along with those from other WPSF4 policyholders in a single fund. All policyholders share in the fortunes of the fund.
- 2.6 We invest the fund in shares in UK and overseas companies, property, fixed interest investments (such as government bonds) and cash deposits. Investing in a mix of investments helps spread risk as it means that the whole fund is not dependent on the performance of a single investment or type of investment.
- 2.7 Some types of investment are more risky than others. Shares in companies go up and down in value much more than government stocks. When we decide how much of the fund to place in different types of investment, we take into account the guaranteed benefits we have already promised. We ensure that there is enough money invested in less risky investments – such as fixed interest investments – so that we can be sure of paying the promised minimum benefits. This is one of our main aims set out in the previous section.

Smoothing

- 2.8 Smoothing is an important feature of with profits policies. We aim to reduce the effect of short term ups and downs in the stock market by setting bonuses that smooth out the peaks and troughs. This means that we pay out more than the unsmoothed result when markets are low, but less than the unsmoothed results when markets are high.

- 2.9 Smoothing reduces the risk of you receiving a low payout if stock markets are low when your benefit is due to be paid. In exchange you won't receive the full benefit if markets are high.

Profits from other business

- 2.10 In section 1, we mentioned that the fund also contains other policies that are not 'with profits'. This other business is designed to make profits, which are added to the returns earned on the investment of your premiums. This means that additional profits from these other policies are paid out to with profits policyholders, such as yourself.
- 2.11 Policies that are not 'with profits' might give rise to losses. Any losses would be deducted when we determine how much can be paid as bonuses on our with profits policies. It is the performance of the fund as a whole that determines the amounts that can be paid.

3 How we decide the bonus rates

Types of bonus

- 3.1 There are two types of bonus added to your policy before you start drawing a pension from it – annual bonus and final bonus.
- 3.2 We work out the annual bonus to be added to each policy in the first three months of each year, based on the results of the previous year. We add this bonus to your policy by increasing the guaranteed benefit that will be paid. These bonus additions are guaranteed, and we cannot reduce or remove them after the rates have been declared.
- 3.3 Final bonuses are an additional sum that we add to the guaranteed benefits when they are paid out. Final bonuses ‘top-up’ the existing guaranteed benefits (these are the original basic annuity and the annual bonuses that have been added from year to year) to a fair level. Final bonuses are not guaranteed, and the rates may change at any time. Final bonuses are sometimes also called ‘terminal bonuses’
- 3.4 After you start drawing the pension from your policy, a proportion of the pension will not be guaranteed. This will be the proportion of the total policy value that was represented by final bonus when you started drawing benefits.
- 3.5 It is our intention to keep this non-guaranteed part of your pension unchanged as far as possible. However in the future it may be necessary to increase or reduce it, so that we can be sure we are treating all policyholders in the fund fairly.

How we calculate the bonus rates

- 3.6 We calculate the annual bonuses assuming we invest the part of the fund that covers the guaranteed benefits we have promised in secure investments, such as fixed interest securities. This means that annual bonus rates are based on the investment returns we expect to receive from fixed interest investments.
- 3.7 As there is no new business being written in WPSF4, all the assets in the fund need to be paid out to the existing policyholders. We set our final bonuses to achieve this as fairly as we can between different policyholders.
- 3.8 Achieving fairness is a difficult task. If we pay high rates of final bonus to policies retiring now, and it turns out that all the pensioners live longer than we expected, the fund will run out of cash. The only thing we will be able to do is to reduce the non-guaranteed part of policyholders’ pensions.
- 3.9 If we pay out too little now the fund will be in a large surplus as it runs down, and the last remaining policyholders will get very large benefits. Neither of these approaches is fair to everyone.

- 3.10 When we calculate the final bonus we use actuarial calculations to estimate the current value of:
- the investments held in WPSF4;
 - plus the likely future investment returns the fund will earn;
 - plus the future premiums that we expect to receive;
 - less the future expenses that Reliance Mutual will charge to WPSF4;
 - less the cost of paying the guaranteed benefits and the expected future annual bonuses (assuming our annual bonus rate does not change in future) to all our policyholders.
- 3.11 The result of this calculation is the amount that we can use to pay final bonuses.
- 3.12 Final bonus rates are expressed as a fixed proportion of the basic annuity plus attaching annual bonuses. This generates a smooth scale of policy values for policies started in one year to the next.
- 3.13 In order to implement the principles of smoothing discussed in section 2, we restrict the changes in payout on similar policies from one year to the next normally to a maximum of 10%. If there are very large movements in stock markets we may have to increase this figure.

How often do we change bonus rates?

- 3.14 As we use the current rate of annual bonus when we calculate final bonuses, it is unlikely that annual bonus rates will need to change in future.
- 3.15 We usually review final bonus rates each year, normally in March. The method used generally leads to stable rates unless there are large movements in stock markets, so reviews at other times should not be necessary.

Early Termination Values

- 3.16 If you are unable or do not wish to continue paying premiums to your policy, it is not normally possible for a cash value to be paid, although you can transfer the value of your policy to another pension company.
- 3.17 When we calculate early termination values, we try to treat policyholders terminating on a basis that is consistent with and fair to those policyholders who remain in the fund.

4 Further Information

Principles and Practices of Financial Management

- 4.1 This guide is a brief summary of Reliance Mutual's Principles and Practices of Financial Management (the PPFM). The PPFM is a fuller description of how we manage our with profits business. You can obtain the PPFM by contacting us through one of the methods below. The PPFM is also on our internet site www.reliancemutual.co.uk (click on the "With profits Information" section).

Other Information

- 4.2 We also produce an annual commentary on each year's bonus declaration. This is sent out with annual notifications of bonus, and is also on our internet site.
- 4.3 This guide is also on our internet site www.reliancemutual.co.uk
- 4.4 If you would like any information about the benefits provided by your policy, or the way in which we manage with profits business generally, please contact us:
- You can write to our Actuarial Department at:
Reliance Mutual Insurance Society Limited
Reliance House
6 Vale Avenue
Tunbridge Wells
Kent TN1 1RG
 - You can telephone us on 01892 773389
 - You can e-mail us at actuarial@reliancemutual.co.uk
